

MNAT M International Doctoral Summer School. Patterns in Life and Social Sciences

GRANADA, SPAIN. 13-20 JUNE 2019
INTERNATIONAL PHD SCHOOL MODELING NATURE (MNAT)

Modelling Nature (MNat)
Patterns in Life and Social Sciences
13th - 20th June 2019

The formation of patterns in life and social sciences, economics or engineering is something that we live with daily and makes nature to show us with an internal order and a very specialized organization.

Flocks of birds that self-organize to migrate, traffic flow, evacuation of large concentrations of individuals, groups in social or ecological networks, economic developments, morphogenesis and developmental biology, singular fronts, or simply why we see the way we are, are only a few examples of patterns all around us. We propose to review some hot topics of these theories through specialized mini-courses and a workshop.

Application Deadline: **Until 30 May**
Escuela Internacional de Posgrado
Universidad de Granada
